

Summary

This page goes over the process of installing Orchestrated on a new computer. This only applies to customers who have their own client-server environment.

On the wrong page?

- OnDemand customers: Log in to Orchestrated OnDemand
- Servers hosted by Orchestra: Log in to Orchestrated Enterprise

Step-by-step guide

- 1. Log in to the new computer using an Administrator account
- 2. Open your Start menu and do a search for "UAC"
- 3. Choose "Change User Account Control settings"

Control Panel (1)	
Control Panel (1)	l settings
≫ 5ee more results	
uac	Log off

- 4. In the User Account Control window, drag the bar down to "Never notify" and click OK
- 5. Restart your computer
- 6. Open a Windows Explorer window by going to Start>Computer
- In the address bar at the top, type in *your server name*\B1_SHR\Client (In this example, the server name is "sandbox")

- 8. Right click the "setup" application, and choose "Run as administrator"
- 9. Follow the instructions on the screen to install the Client
- 10. After the install finishes, navigate to C:\Program Files (x86)\SAP\SAP Business One\Conf
- 11. Right click the "b1-local-machine" file and choose "Edit"
- 12. Verify that the section in this picture has your server name:30000("sandbox:30000" in this example) and not "localhost:30000"

- 13. Navigate to C:\Program Files (x86)\SAP\SAP Business One DI API\Conf and repeat steps 11 and 12
- 14. Log in to Orchestrated to verify that everything installed successfully

If you are unable to open Orchestrated after following these steps, contact Orchestra Support for troubleshooting help.
