

Summary

The ability to add adjuncts to a tank is an important function for many breweries and distilleries, especially as the trend for rare and limited versions of favorites is in more demand than ever before. Orchestrated allows the user to select any item in inventory to add to a tank, right from the worksheet – without manually creating an additional production order. The cost of the added item automatically rolls up into the batch of liquid in the tank.

How To

Add adjuncts from either the **Cellar or Packaging Worksheets** by right-clicking on a tank and clicking Add Adjuncts. The row does not have to be highlighted first.

The screenshot shows the 'Cellar Worksheet' window. At the top, there are tabs for 'Cellar', 'Green Beer', and 'Transfers'. Below the tabs, there are filters for 'Location' (Production), 'Status' (Released), 'Start Date' (01-22-17), and 'End Date' (01-28-17), along with a 'Refresh Matrix' button. The main area contains a table with columns: Warehouse, Item Code, Item Name, Volume, Batch, Days Left, Batch Received, and Modified. A context menu is open over the row for Item Code GB1005, with 'Add Adjuncts' selected. Other menu items include 'Copy', 'Copy Table', 'Maximize/Restore Grid', and 'Filter Table'.

Warehouse	Item Code	Item Name	Volume	Batch	Days Left	Batch Received	Modified
F11	GB1005	Green Beer - Portlandia Porter		POR106	-304	03-15-16	
F12	--(Empty)--						
F13	--(Empty)--						
F14	DH1003	Dry Hopped Beer - IPA		IPA174-P	-8	01-13-17	
F15	GB1004	Green Beer - Stout		STT19-RAS	-2	01-13-17	

The screenshot shows the 'Blending & Additions' dialog box. It has fields for 'Document', 'Warehouse' (F11), 'Status' (Open), 'Blend Date' (01-27-17), 'Quantity' (143.70), 'Final Item' (GB1005 - Green Beer - Portlandia), and 'Batch' (POR106-RAS). Below these is an 'Input Items' table with columns: ItemCode, ItemName, Quantity, Warehouse, and Batch. The table contains three rows: 1 GB1005 Green Beer - Portlandia Porter 141.20 F11 POR106, 2 RP5001 Puree - Raspberry 50.00 A1 RASP01, and 3 (empty) 0.00. At the bottom, there is a 'Comments' field with the text 'Added 50 lbs of raspberry puree; for winter fest in Richmond.' and 'OutPdo' field. 'Add' and 'Cancel' buttons are at the bottom left.

ItemCode	ItemName	Quantity	Warehouse	Batch
1 GB1005	Green Beer - Portlandia Porter	141.20	F11	POR106
2 RP5001	Puree - Raspberry	50.00	A1	RASP01
3		0.00		

On the **Blending & Additions** screen, select the Item Code of the adjunct, similar to other documents with items in Orchestrated. Fill in the quantity of the item and the warehouse to pull from.

On the item's row, the Batch column field turns grey if the item is non-batch-managed, otherwise a magnifying glass appears. Click the icon to select a batch.

- If only one batch exists of the item, Orchestrated populates that batch.
- If that item has more than one batch a dialog box appears requesting that the user select a batch.

Before adding the document, review the Batch ID in the Top Left in case you want to distinguish this batch of beer as a separate batch. In addition, increase (or decrease) the Quantity field in the Top Right if the adjunct affected the volume of liquid. Comments can also be added at the Bottom.

After processing the adjunct addition, find the **Modified** column in the *Current Tank Status* window on the Far Right of both the Cellar and Packaging Worksheets.

Behind the scenes, the Blending & Additions screen works similar to blending tanks, so if you hit any hiccups ensure your database has what it needs for this feature. Those requirements, along with troubleshooting tips, can be found here: [Tank Blending](#)
