

Summary

When sending sensitive information, it's important to use a process that is secured so that unauthorized users won't have access to that information. A password reset request is a good example of when PrivNote should be used.

To support the security of our customers, Orchestra Consultants use PrivNote to create a secure exchange of private information. Consultants will either ask you to send in your desired password, or provide you with a new one, using PrivNote.

Step-by-Step Guide

1. Go to <https://privnote.com/>
2. Write your information in the yellow box
3. Click 'Create Note' (You also have the option of checking the setting to 'Notify me when this notes get read')
4. PrivNote will then create a link which you can send to your consultant

The screenshot shows the PrivNote website interface. At the top, there is a dark red header with the 'privnote' logo (a padlock icon) and the tagline 'Send notes that will self-destruct after being read'. Navigation links for 'About', 'FAQ', and 'Contact' are on the right, along with a language dropdown set to 'English'. Below the header, three numbered steps are illustrated with icons: 1. 'Create a note and get a link' (hand cursor icon), 2. 'Copy the link and send it to whom you want to read the note' (envelope icon), and 3. 'The note will self-destruct after being read' (flaming paper icon). The main content area is titled 'Write your note below' and features a large yellow rectangular text box. The text 'Password' is entered at the top of this box. Below the text box is a checkbox labeled 'Notify me when this note gets read'. At the bottom right of the form is a red button labeled 'Create note'.
