

[Retail Transfer Scenarios] - Adding The Retail Transfer Scenario To The Common Functions Doesn't Work Upon Re-Logging In

Issue

When going to the retail transfer scenarios under Admin-Setup->Financials->Retail Transfer Scenarios and trying to add it to the Common Functions of your widget, you are able to keep it in that window for the current session. However, when you exit and log back in, the name is blank and the icon no longer works.

Workaround

You have to go directly to the menu option or add the icon back on for that specific session every time.

Resolution

There is no ETA for resolution.
