

Packaging QC - Volumes

Summary

The Volumes screen allows you to store multiple samples of volumes taken on a production order.

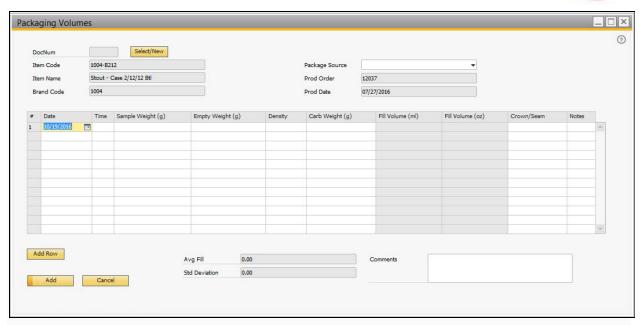

Readings include date/time, sample weight, empty weight, density, fill volume and crown/seam readings.

Details

The Volumes button is located on the Packaging Worksheet under the QC Data section.

- 1. Select the production order of the packaging run that needs to have the volumes documented.
- 2. Click the "Volumes" button.

Once the reading is completed, click "Add" to commit the row. Next time you access the Volumes page for this same production order, the volumes from all previous readings will display on this screen as well.
