

## Report Summary

This report generates a dashboard for several KPIs associated with production. These KPIs are specific to your production process whether it's brewing, distilling, packaging, etc. It displays metrics for daily production volume, average costs, yield percentage, reject percentage and percent of plan completed. These values can be compared to a previous time period; for example, last month or last quarter.

All of this information is supplemented by a few charts that display your volume over time. In addition to the key metrics above, the report provides a snapshot of your tank utilization, and a quick raw material status for potential item shortages. There is a section that compares your open sales orders with your on-hand stock – it even shows the specific line items that are short! Lastly, a quick view into your open production orders broken out by process type.

## Default Location in Orchestrated

Production > Production Reports > Orchestrated > Production Dashboard

## Parameter Entry

Mandatory:

- Starting Date
- Ending Date
- Location
- Compare to: No Comparison, Last Month, Last Month to Date, Last Quarter, Last Quarter to Date, Current Year, Current Year to Date, Last Year, Last Year to Date, Last Year-Same Range
- Unit of Measure: Gal, BBLs, CEs, L, hL

Optional

- Select:
  - Brands
  - Warehouses
  - Item Groups
  - Items
