

What Are The Attributes For In Barrel Management?

Summary

Attributes are fields created specifically for "miscellaneous" uses on a per user/client purpose. Each client can determine the best use for these attributes and adjust accordingly.

What are the attributes most commonly used for?

Those pesky attributes are used for a variety of bits of information, but some of the most common are:

- An internal Barrel ID if your brewery or distillery isn't using the system generated IDs.
- Storing the batch liquid number that originally filled the barrel
- A location of the barrel
- Who you might have bought the barrel from
- Other crazy things...

How to rename the attribute fields

You can change the display name of these fields super easily. This really helps when trying to communicate to others what that field is for; you can even bold and italicize it for greater visibility. To change the display name do the following:

1. Hover over the field you want to change...
2. Then, hold down the **Control** key on your keyboard and **double-click** on the name
3. Change the *Description* and press the **Update** button.
4. Profit!

The screenshot shows a 'Barrel Master Data' window with the following fields:

Barrel ID	ORC-2	Contents	BA1005	Internal Barrel ID	530-2
ItemCode	BRL1001-FLD	Contents Category		Attribute 2	
Warehouse	A1	Contents Batch	POR106-11764-1	Attribute 3	
Type	Bourbon	Fill Volume	1.71	Attribute 4	
				Attribute 5	

The 'Changing Description' dialog box is open, showing:

- Original Description: Attribute 1
- New Description: Internal Barrel ID
- Format: Gold Italics
- Buttons: OK, Cancel, Restore Defaults

At the bottom of the main window are buttons for OK, Cancel, and Add Note.

How to filter your barrels based on the attribute

Oh now we're getting to the good stuff. To filter your barrels based on the attribute, the first thing you need to do is click on the **Filter Table** button in the menu bar.

Welcome, manager. You are in the Home cod Filter Table, rated 4.5 Demo. [Look up menus](#)

Total Barrels 113 Total Volume 160.150000 Total Proof Gallons 0.0

1. Now that we have the **Filter Table** window open, find those attributes you are using.
2. Select the *rule* you want to filter by, there's a lot but you will probably only use a couple
3. Then select whatever the values are you are filtering by. So for example, if I want to see all barrels that are in the range "530-1" & "530-3", I would choose the rule *In Range* and then in the *Value* column I would select 530-1 from the first drop down and 530-3 from the second!
4. Once you have input your filtering criteria, press the **Filter** button to filter the BMC.
5. To clear your filters, go back into the **Filter Table** window and press the **Clear** button.
