

Summary

Have you ever tried to find a specific module (i.e. Inventory Counting, Goods Issue, etc.) or a report (i.e. Production Cost Analysis, Taxable Shipments by State, etc.), but you just can't seem to find it?

Whether the feature that you're looking for has been moved or you just can't remember where it is, you can use the search feature to look it up.

If you go to the upper right-hand corner of your Orchestrated window, you'll see a search box. The search menu defaults to "Search Data," so if you're looking for a module or report, you'll need to click on the drop down menu to the left and select "Search Menus." Once you make that selection, you can type in what you're looking for. A list of results will begin to populate beneath the search bar.

Furthermore, if you hover over one of the results in the list, the system will display the associated menu location.

Now you'll be able to find lost modules and reports much more quickly and easily!

Version 4.5.1.0
