

# Auto-Select Batch On Express Configuration

## Summary

Auto-batch select behaves much like 'auto-select all' but for Express Production. This functionality is controlled at the company level and takes into account FIFO or FEFO.

1. Navigate to **Administration>Setup>General>Orchestrated Configuration**

2. Switch to the *Application Settings* tab

3. Scroll until you find the field *Setup Auto Batch Select Option*. There are three options.

- *Automatic*: Default selection. Pre-fills Planned Quantity to Actual Quantity by old *Batch In* date.
- *Semi-Automatic*: Displays a button on Express Production to pre-fill Planned Quantity to Actual Quantity by batch.
- *Disabled*: Fully disables the feature

Orchestrated Configuration
