

Logging In to Orchestrated

What Is Not Changing?

When logging in to Orchestrated, you launch the Microsoft Remote Desktop App and enter your credentials there first. This part is not changing.

What Will Change?

BEFORE THE UPGRADE

When Orchestrated launches, you had to fill in your username and password on a 2nd screen.

If you needed to switch companies aka log in to a different database, you would choose "Change Company", select the database to log in to, and enter your credentials here.

Choose Company

User ID: orchestra Password: [] Change User

Log on with Current Domain User

Current Server: MSSQL_2016 Database: []

Companies on Current Server

Company Name	Database Name	Localization	Version
[]	[]	United States Of A	930220
[]	[]	United States Of A	930220

Find By:

AFTER THE UPGRADE

Now, after you enter your credentials into the Remote Desktop app, instead of entering a 2nd set of credentials, you will just be prompted to choose the company/database that you are logging in to.

Choose Company

User ID: pleming-high

Company Name	Type	Localization	Version
