

There are two main reasons you're unable to see reports:

1. Most likely, your Orchestrated Add-On isn't running. If you've seen/used reports before and you can't see them now, this is probably why. See [How to Restart the Orchestrated Add-On](#)
2. Your user doesn't have authorizations to see these reports. Speak with the super user/power user at your location (or your manager if you're not sure) to see if your authorizations need to be adjusted.
