

Summary

A simple solution to undo production orders that were processed incorrectly.

Description

This solution will take any production order that has been created and processed and reverse the transaction. To keep linkage and TTB reporting accurate, the express disassemble function uses the standard Orchestrated process, but does it for you behind the scenes including assigning the appropriate batch ids.

Important Note: If you are disassembling a 'Barrel Mgmt' production order, the entire quantity of the barrels produced must be in the original receiving warehouse.

Details / How-To

Simply open the production order in question, right-click your mouse in the top portion and select **Disassemble**. Yup... that easy.

The screenshot shows the 'Production Order' window. On the left, there are fields for Type (Standard), Status (Released), Product No. (W1001), Product Description (Wort - Amber Ale), Planned Quantity (100), Warehouse (BH01), Turn/Brew #, and Master Prod # (13). On the right, there are fields for No. (Primary 10196), Order Date (11/19/14), Production Date (11/20/14), Production Time (6:00AM), Due Date (11/20/14), User (manager), Batch #, Batch Date, and Suff. Below these fields is a table with columns Warehouse, Issue Method, and Weight In. A right-click context menu is open in the center, with options: Cancel, Duplicate, Disassemble (highlighted with a red box), New Activity, Related Activities, Report Completion, Issue Components, Transfer Components, and Relationship Map...

Two items to note, at the bottom of the disassembled production order and the disassembly production order is a reference to one another (Fig. 1) and in the Production Worksheets, disassembly PdOs have been highlighted with an 'X'

Fig 1.

The screenshot shows two 'Remarks' fields. The top field contains the text 'Disassembled by pdo#10204'. The bottom field contains the text 'Created By Express Disassembly Disassembly of pdo#10196'. An arrow points from the top field to the bottom field.

After you disassemble the Production Order, you will want to recreate it. You can drill into the original Production Order, right click and select "Duplicate." Ensure your information is still accurate & Add that Production Order.
